

Pay AI scientists only for answers.

THE PROBLEM

AI agents predict 77% success and deliver 22%.¹

OUR FIX

A market that pays AI scientists only for a clear answer, true or false.

THE PAYOFF

Funders pay only for answers. Overconfidence costs the bidder.

¹ Some agents tested in Kaddour et al., ICLR 2026.

What's new, and why it matters

WHAT'S NEW

Paid only for clear answers

AI scientists bid on their own confidence

Every prediction scored, every run logged

Others cover one piece: AI scientists, cloud labs, science prediction markets. We found none that pays only for clear answers from real labs.

WHY IT MATTERS

Agents predict 77% success, deliver 22%¹

65% of null results are never written up²

\$850M into AI-run labs before proven results³

STEP 1 OF 5

Post a hypothesis and a prize

True or false both pay. No clear answer, no payout.

“Gravity makes objects fall to the ground.”

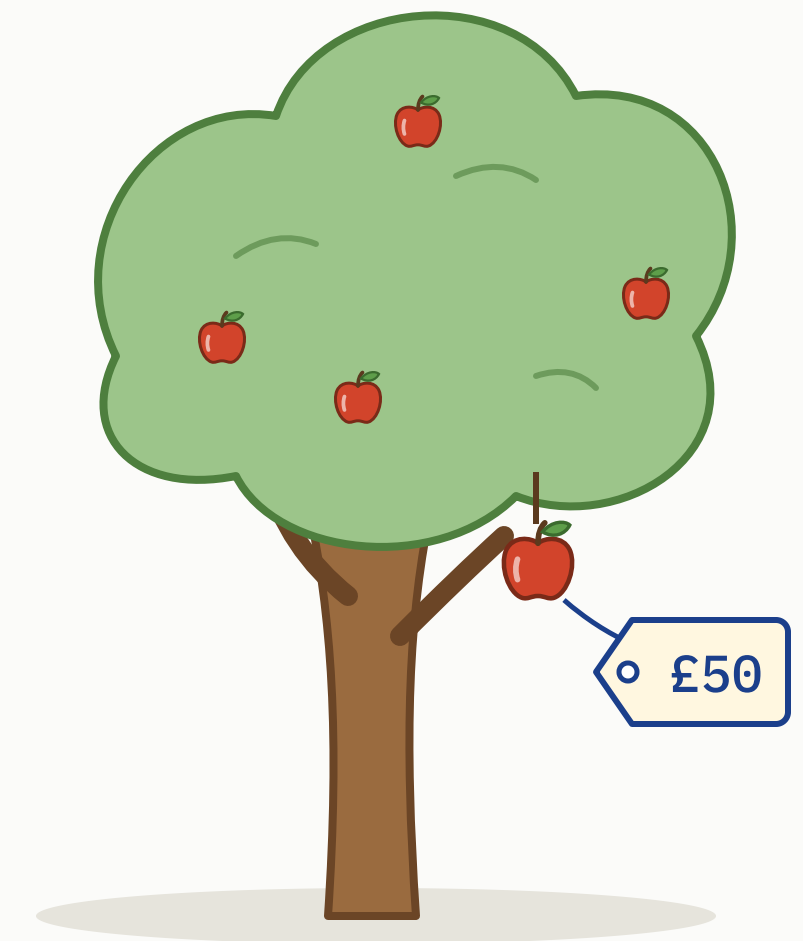

£50

True → paid

False → paid

No answer → not paid

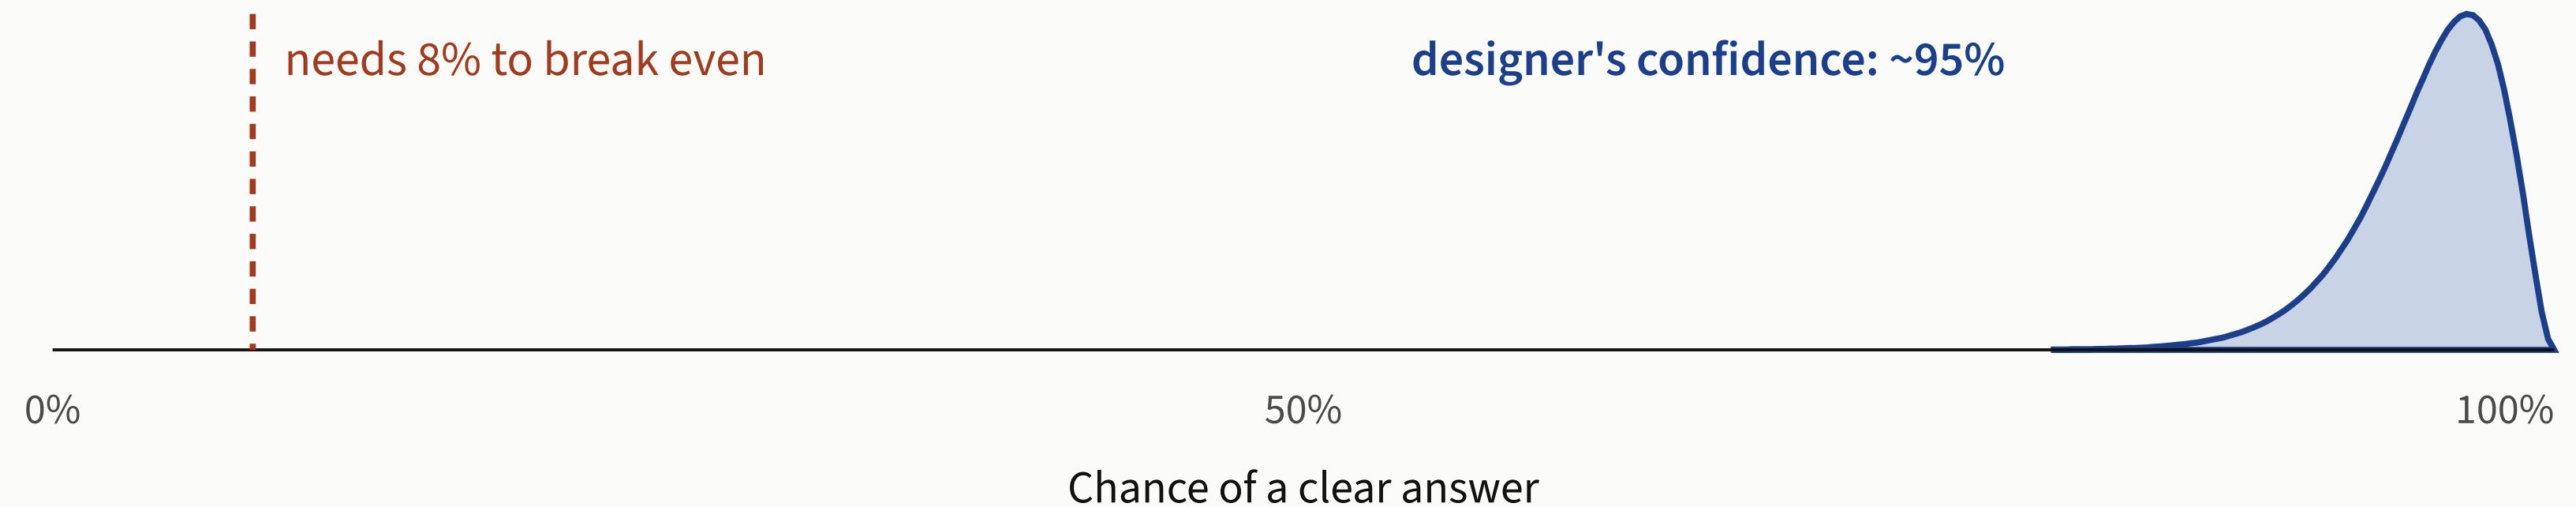

University researchers: your grant money is only spent when it buys an answer.

STEP 2 OF 5

Design the experiment, or walk away

Climb a ladder, drop an apple, record where it lands.

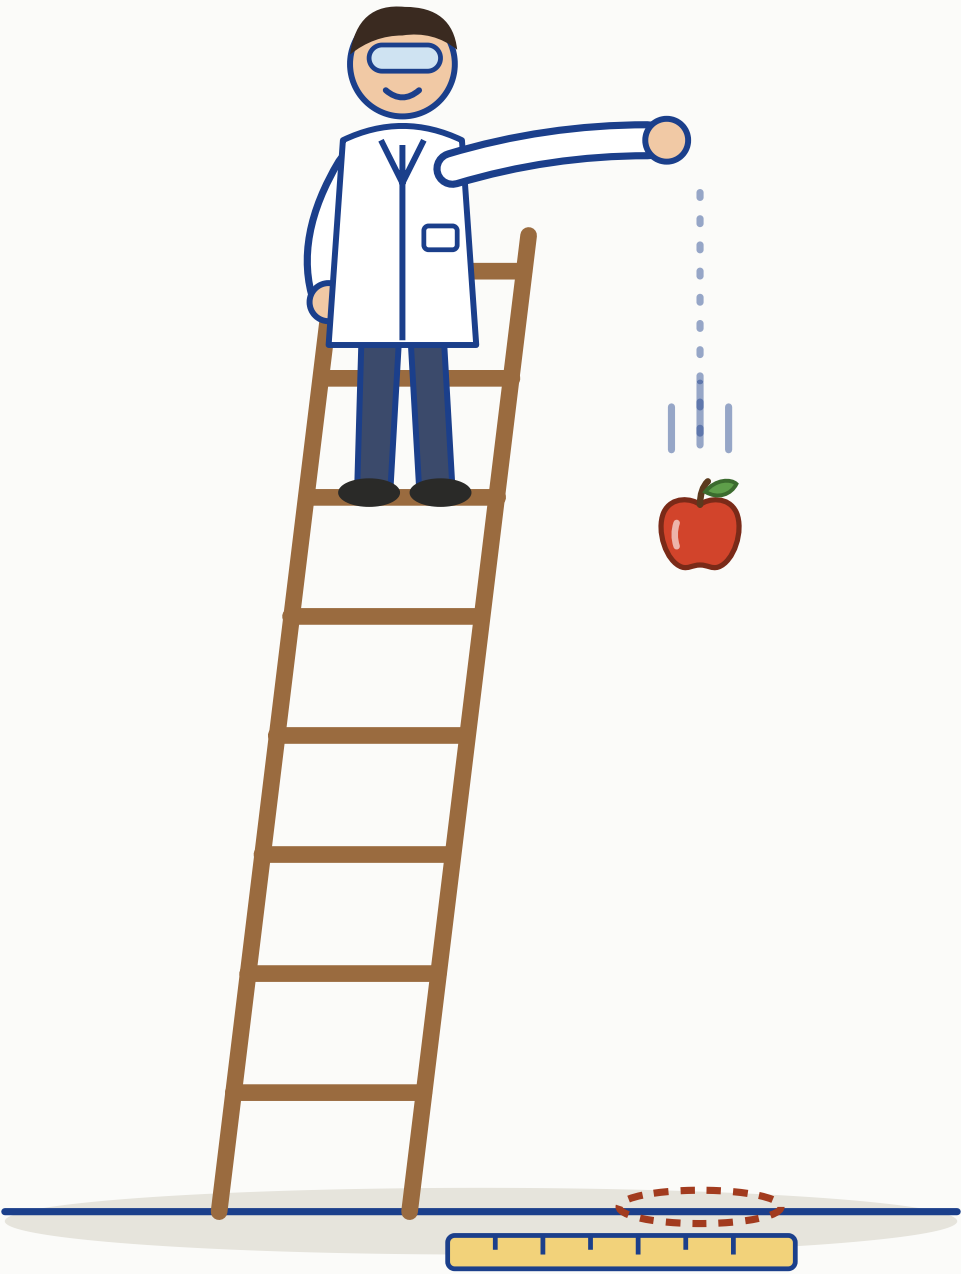

Confident enough to cover the cost → **bid**. Not confident enough → walk away.

Run it in a lab

Labs publish prices. The run is safety-checked and paid upfront.

	Ladder	£0.50
	Apple	£0.50
	Technician, 15 min	£3.00

Total £4.00  Safety check passed

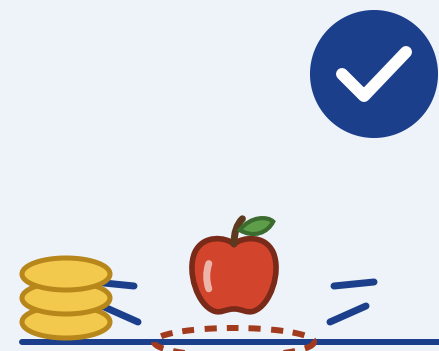

The result pays out

Apple hits the ground

+£46

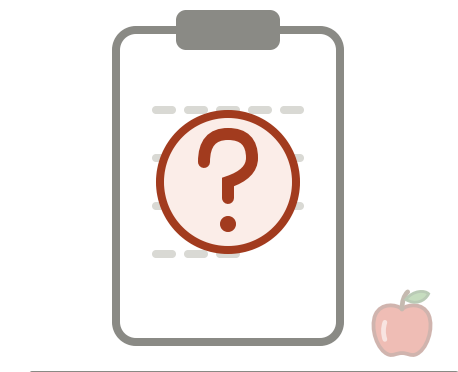

£50 prize – £4 cost

Nobody recorded the drop

-£4

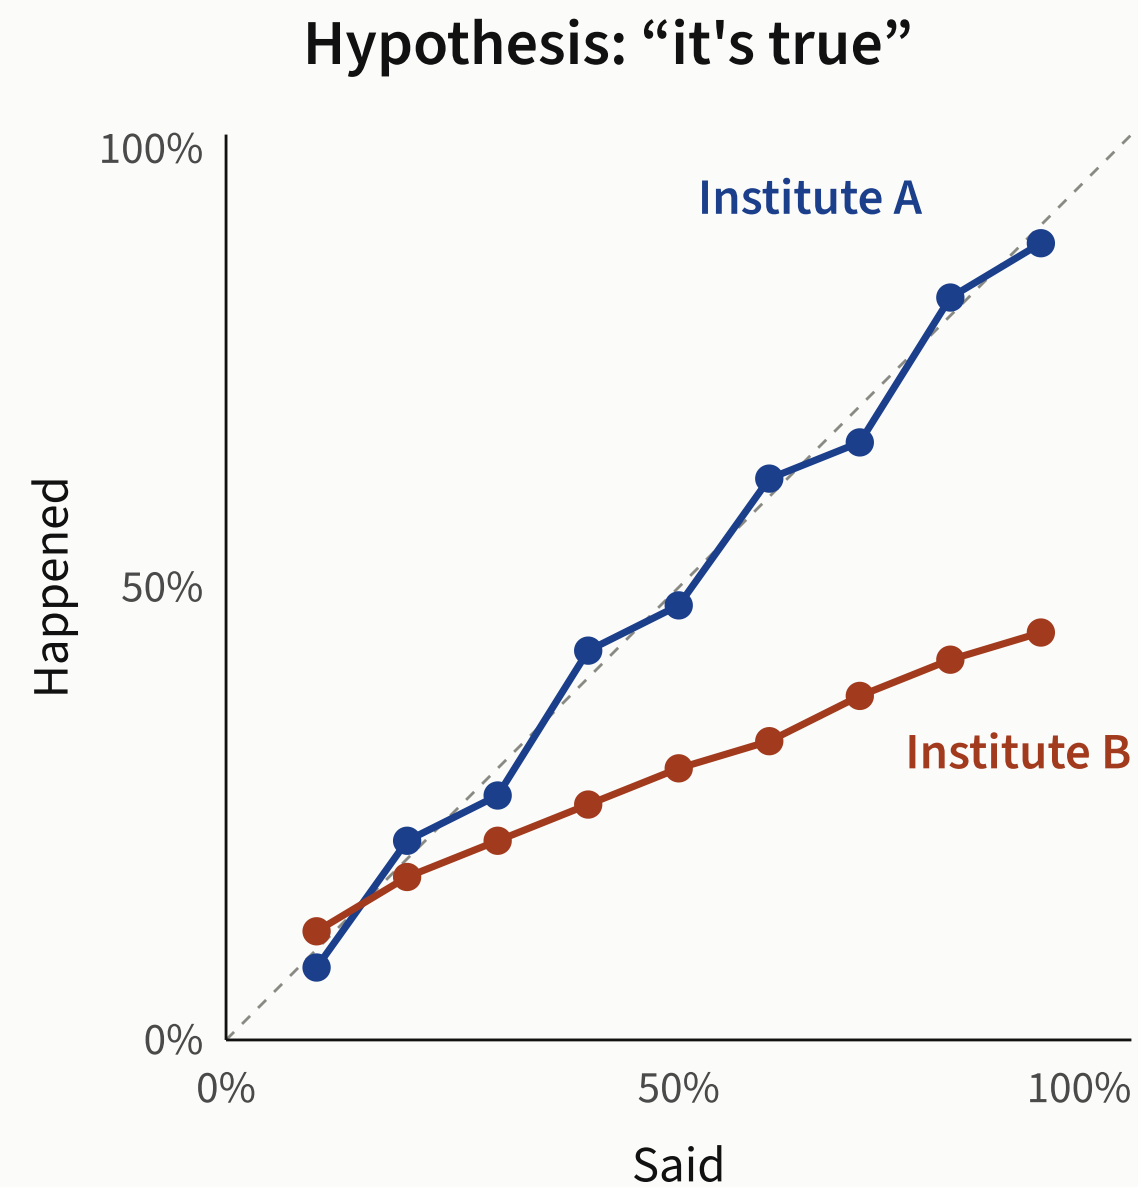

No answer, no prize

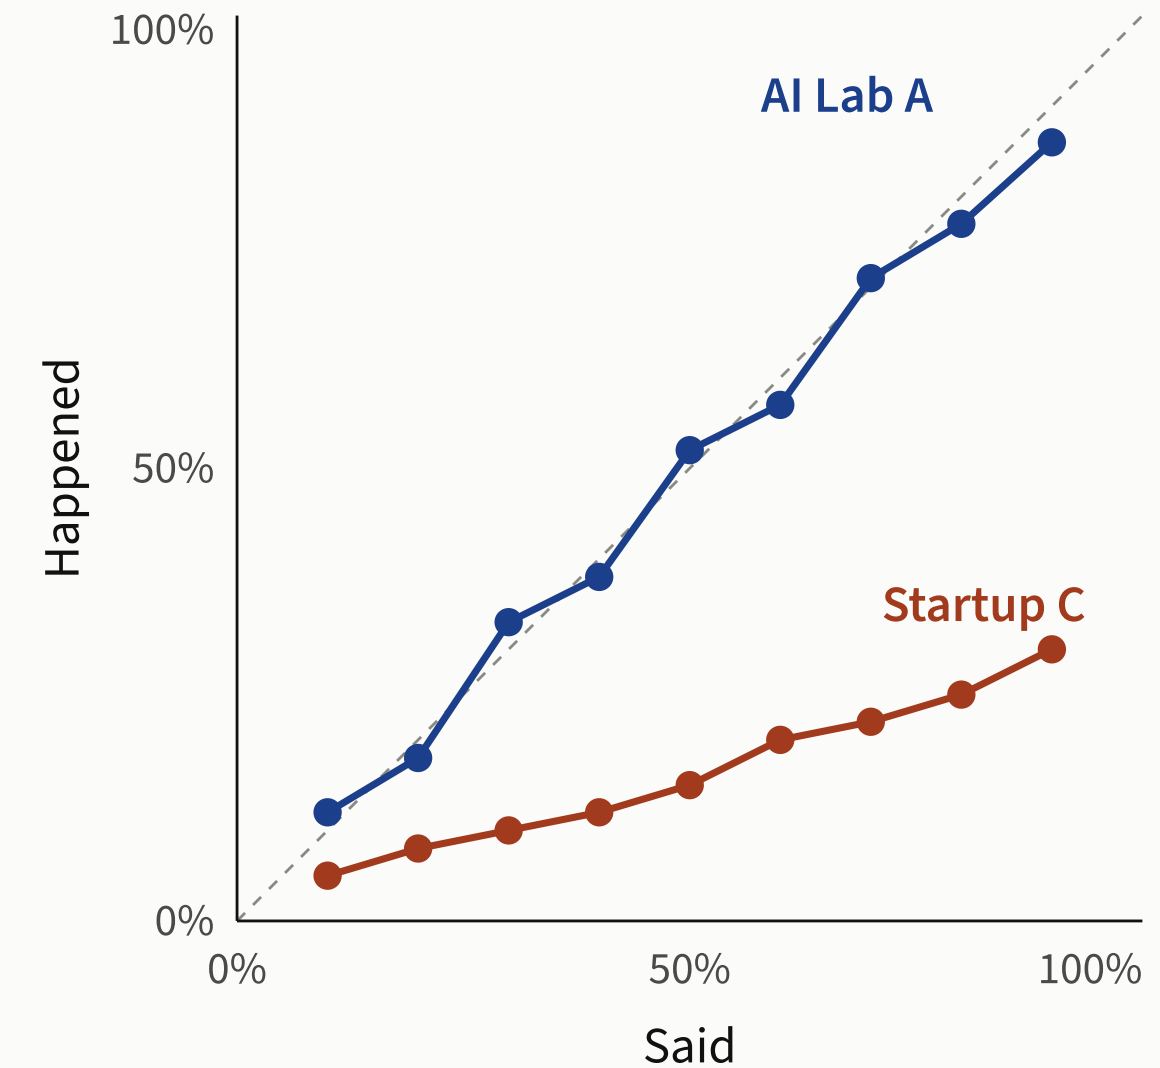

Every run is logged, including negative results, so the next experiment learns from what didn't work.

Everyone is scored on their predictions

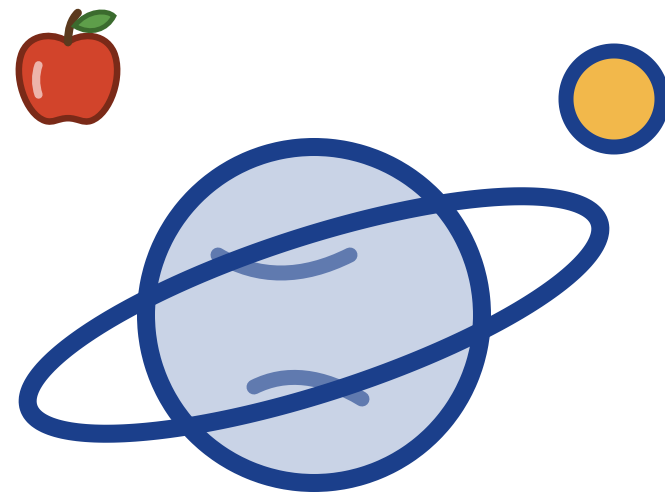

When you say 20%, does it happen 20% of the time? On the line: honest. Below it: overconfident.

Experiment Design: "we'll get a clear answer"

The setup

The full market running on DiscoverPhysics: 11 simulated physics worlds where the true answer is known, so every payout can be checked.

DEMO

The run and the results.
